

INTRODUCTION TO AGILE METHODS / 1 DAY COURSE

A course for technical and non-technical people that explores the impact Agile techniques have on IT projects that helps you to:

- Provide maximum value for clients
- Deal with new and unexpected information and changes
- Deliver on time and to schedule
- Plan work in short iterations using Agile methods

AGILE FOR MANAGERS / 1 DAY COURSE

A second-level course for project, programme managers and business development people who have completed the Introduction course or with existing Agile experience and knowledge who intend to introduce use Agile both inside their development team and with clients that provides:

- Proven strategies demonstrating the benefits of Agile over short timescales
- A framework for integrating Agile with other methods such as PRINCE2™ and Lean

TECHNICAL ASPECTS OF AGILE / 2 DAY COURSE

A second-level course for developers and technical teams that want to use Agile to deliver sustainable code that includes:

- Pair Programming:
the arguments and objections plus hands-on experience
- Test Driven Development:
write a failing automatic test for software added to a system and code against them using JUnit
- Re-factoring:
build on TDD to allow principled clean up, use re-factoring to clean up and for ongoing development

This course is for those comfortable programming in Java. If you want to do the course but do not use Java please contact us.
